

UP 503 | Physical Planning | Fall 2016

Instructor: Dustin Allred, dallred2@illinois.edu

TA: Niharika Kishore, nkishor3@illinois.edu

Time: T, Th, 3:30pm – 4:50pm

Room: T – Temple Buell Hall, Room 223, Th – ACES Academic Computing Facility, Room 29

Office Hours: Instructor – by appointment, TA – M, 2:00pm – 3:00pm

Prerequisite: Graduate standing in DURP or consent of the instructor

Course Description

An urban area changes to keep pace with the shelter, work, recreation, shopping, and travel needs of its inhabitants. In accommodating these human activities, land is consumed, and current trends suggest that land in the United States is being consumed by expanding urban areas at an unprecedented rate. In the St. Louis metropolitan region for instance, the urbanized area grew by around 50% between 1990 and 2000 even though it's population grew by less than 1%. This suggests that the physical space our cities occupy is changing and evolving without, or in some cases despite, changes in population.

This consumption of land triggers several questions:

- What do we do on the land?
- How much land do we use?
- What is the type, manner, and intensity of our use of land?
- What are the environmental, economic, and social consequences of land use change?

Physical planning – managing the way land is used and reused to support human activities – has been a significant and longstanding part of a professional planner's responsibilities. Physical planning in the United States is typically a function of local government. Physical planners use land-use controls (ordinances and regulations) along with site plan review to shape physical planning decisions.

Course Objectives

This course seeks to prepare you to deal with a variety of complexities that characterize physical planning through hands on tasks. Rather than learn about issues at an arm's length, you engage intensely with information and through this experience learn about the possibilities and limitations in physical planning.

By the end of this course you should:

- Understand contemporary, effective physical planning
- Understand the process of physical planning decisions

- Know how to use Adobe software applications to communicate planning analysis and create professional reports
- Know how to use digital spatial data to create effective maps

Course Format

To achieve these objectives, the course brings together some preliminary work and key components all built around planning for physical development at both the regional and site scale. Steps in the semester long process conclude with a midterm natural systems suitability report and a final site plan report to include:

- Preliminaries
 - Getting familiar with the built environment
 - Map interpretation and making skills
 - Software introductions
- Regional and site scale natural systems analysis
- Socio-economic analysis
- Site engineering analysis
- Site layout and small area plans

All components will be worked on individually. While you are encouraged to discuss the work with each other and with the course instructors, the work and material you hand in must be your own.

Deliverables in the course will include one assignment per week and two reports. The suitability analysis report will be due towards the middle of the semester. The second half of the semester will focus on site scale planning concluding in a site plan report. For both sections of the course, intermediate weekly assignments will build towards the applicable report; therefore it is crucial that you complete assignments on time, as this work will be useful for synthesizing your reports.

Course content will be covered in lectures and discussions, and labs. Lab sessions will introduce both software applications and analytical frameworks that will be applied in completing weekly assignments. These sessions will be a hands-on opportunity to become familiar with common software applications used in planning practice.

Course Materials

There are no required books for this course and all required readings will be made available online via the course Compass site. This course involves considerable computer-based work so be sure you are able to access the Department's computing facilities. The specialized software needed to complete assignments and reports is available on the desktop computers in the

Department's "computer lab" (room 227) and via the remote desktop server (RDP). Let the instructor know if you are unable to login to the Department's computing facilities.

Learning Philosophy

This course is designed around the idea of learning by doing. You grasp concepts and develop skills by applying them in a real-world situation rather than only reading about them. You engage your classmates and instructors in conversations about the work. While this is often a more effective way to learn the material covered in this course, you must expect to spend more time working on tasks than you would in a course with only reading and homework assignments.

All of the course material is available on the course Compass site, and it is critical that you read and understand all of this material. This will make classroom time more effective and enhance your experience in the course. Please inform the course instructor if there are any errors or discrepancies on this site.

Course Evaluation

Student evaluation in the class will be based on participation, weekly assignments, and two reports. Class participation grades will reflect your command of the assigned readings and contribution to class discussions. Attendance is mandatory, and any unexcused absence will reflect in your participation grade. All other grades will depend on the quality of ideas generated and of the presentation of these ideas, on the effectiveness of responses to comments, and on the timely completion of work. Late submissions will be penalized one point and subsequently one point for each week that they are further delayed. If you must miss a class session due to special circumstance such as illness or family emergency, you should notify me via e-mail (dallred2@illinois.edu) as soon as possible. All assignments should be submitted to Compass on the due date unless otherwise noted. Late assignments will be graded down one letter grade per day (half a letter grade if turned in after class on due date). The course grade earned will be the weighted average of the following components:

Class participation	10%
Preliminary assignments (A1 through 4)	10%
Natural systems analysis assignments (A5a, b & c)	15%
Suitability report (A5)	20%
Site engineering and land use analysis assignments (A6a through f)	15%
Site plan report (A6)	20%

Transformation of numerical grade to letter grade will be according to the schedule below:

A	93-100	C+	77-79.9
A-	90-92.9	C	73-76.9
B+	87-89.9	C-	70-72.9
B	83-86.9	D+	67-69.9
B-	80-82.9	D	60-66.9

The general grading rubric for assignments is as follows:

An “A” assignment demonstrates original thought and synthesis of ideas and sophisticated, cogent analysis. It is clearly written and presented.

A “B” assignment includes above average analysis with appropriate evidence to support ideas. It is clearly written and presented.

A “C” assignment shows a basic level of understanding, with analysis limited to obvious arguments. Writing is competent. It is adequate work.

A “D” assignment misunderstands or misrepresents the material or is so poorly written that it obscures the analysis. It is inadequate work.

Special Circumstances

Due to the participatory nature of this course, please also communicate any expected or unexpected absences with the instructor as early as possible. Every effort will be made to work with students with unusual or unexpected obligations outside the course (family emergencies, health issues, participation in University sanctioned activities, etc.) Students with disabilities or special needs who require any accommodations to facilitate full participation and completion of the course should contact the instructor as soon as possible.

Student conduct

From the University Student Code, Article 1, Part 3: Students enrolling in the University assume an obligation to conduct themselves in a manner compatible with the University’s function as an educational institution and suitable to members of the academic community. Students are responsible for knowing their rights and responsibilities as found in the student code at <http://www.admin.uiuc.edu/policy/code/index.html>.

Course Schedule

WEEK	DATE	TOPIC
1	23-Aug Tuesday	<u>Lecture/Discussion</u> : Course Introduction <u>Assignment</u> : 1 – Understanding Space, Distance, and Area
1	25-Aug Thursday	<u>Lab</u> : Lab Intro <u>Readings</u> : <ul style="list-style-type: none"> • Obama’s Urban Agenda • Progress Report <u>Assignment</u> : 2 – Understanding Density Due: A1 – Understanding Space, Distance, and Area
2	30-Aug Tuesday	<u>Lecture/Discussion</u> : Introduction to Physical Planning, Real Estate Markets, Land-Use and Reuse <u>Readings</u> : <ul style="list-style-type: none"> • Kevin Lynch The City Image and its Elements • Berke et al. Ch. 1 • Miles et al. Ch. 3 and 13 <u>Supplemental</u> : <ul style="list-style-type: none"> • Kevin Lynch Analysis Example
2	1-Sept Thursday	<u>Lab</u> : Using Adobe Illustrator <u>Assignment</u> : 3 – Diagramming with Adobe Illustrator Due: A2 – Understanding Density
3	6-Sept Tuesday	<u>Lecture/Discussion</u> : Suitability Analysis <u>Reading</u> : <ul style="list-style-type: none"> • Anderson Ch. 1 and 2 • Landscape Architecture Notes
3	8-Sept Thursday	<u>Lab</u> : Graphic Representation and Making Planning Maps <u>Assignment</u> : 4 – Making Maps with GIS and Illustrator Due: A3 – Diagramming with Adobe Illustrator
4	13-Sept Tuesday	<u>Lecture/Discussion</u> : Natural Systems (Land) <u>Readings</u> : <ul style="list-style-type: none"> • Lynch and Hack, Appendix A <u>Supplemental</u> : <ul style="list-style-type: none"> • Database of Soil Types in Champaign County • Champaign County Soils Report

		<ul style="list-style-type: none"> • Soil Taxonomy Ch. 1, 5 and 6
4	15-Sept Thursday	<u>Lab:</u> ArcGIS, Illustrator, and Soils <u>Assignments:</u> <ul style="list-style-type: none"> • 5 – Natural Systems Suitability Report • 5a – Slope and Soil Suitability Due: A4 – Making Maps with GIS and Illustrator
5	20-Sept Tuesday	<u>Lecture/Discussion:</u> Natural Systems (Water) <u>Readings:</u> <ul style="list-style-type: none"> • Anderson Ch. 6 • Delineating Watersheds • Floodplain Data and Mapping
5	22-Sept Thursday	<u>Lab:</u> Water Analysis <u>Assignment:</u> 5b – Water Suitability Due: A5a – Slope and Soil Suitability
6	27-Sept Tuesday	<u>Lecture/Discussion:</u> Green Infrastructure <u>Readings:</u> <ul style="list-style-type: none"> • Green Infrastructure <u>Supplemental:</u> <ul style="list-style-type: none"> • CW Green Infrastructure • ILEPA GI Report • ARIES • Habitat
6	29-Sept Thursday	<u>Lab:</u> Working with In-Design <u>Assignment:</u> 5c – Green Infrastructure Due: A5b – Water Suitability
7	4-Oct Tuesday	<u>Lecture/Discussion:</u> The Natural Systems Suitability Report
7	6-Oct Thursday	<u>Lab:</u> Work Session Due: A5c – Green Infrastructure
8	11-Oct Tuesday	<u>Lecture/Discussion:</u> Social Systems and Physical Planning <u>Readings:</u> <ul style="list-style-type: none"> • Socio-Economic Context Example • Neighborhood as Design Paradigm

8	13-Oct Thursday	<p>Lab: Working with Census Data</p> <p>Assignments:</p> <ul style="list-style-type: none"> • 6 – Site Plan Report • 6a – Socio-Economic Context and Social Suitability Analysis <p>Due: A5 – Natural Systems Suitability Report</p>
9	18-Oct Tuesday	<p><u>Lecture/Discussion</u>: Feasibility Analysis and Pro Formas</p> <p><u>Readings</u>:</p> <ul style="list-style-type: none"> • Brookings Report: The Origins of the Financial Crisis • Paul Krugman on NPR • Pro-Forma 101
9	20-Oct Thursday	<p><u>Lab</u>: Using a Real Estate Pro Forma</p> <p><u>Assignment</u>: 6b – Real Estate Pro Forma Analysis</p> <p>Due: A6a – Socio-Economic Context and Social Suitability Analysis</p>
10	25-Oct Tuesday	<p><u>Lecture/Discussion</u>: Site Engineering Analysis – Stormwater Runoff</p> <p><u>Readings</u>:</p> <ul style="list-style-type: none"> • Reducing the Impacts of Urban Runoff • US EPA Basin Best Management Practices • Low Impact Development Manual • Runoff Modeling
10	27-Oct Thursday	<p><u>Lab</u>: Stormwater Runoff Modeling</p> <p><u>Assignment</u>: 6c – Site Engineering Analysis – Stormwater Runoff</p> <p>Due: A6b – Real Estate Pro Forma Analysis</p>
11	1-Nov Tuesday	<p><u>Lecture/Discussion</u>: Site Engineering Analysis – Storm and Wastewater Management</p> <p><u>Reading</u>:</p> <ul style="list-style-type: none"> • EPA Constructed Wetlands • Site Engineering for Landscape Architects • Anderson Ch. 5
11	3-Nov Thursday	<p><u>Lab</u>: Stormwater Detention and Green Infrastructure</p> <p><u>Assignment</u>: 6d – Site Engineering Analysis – Stormwater and Wastewater Management</p> <p>Due: A6c – Site Engineering Analysis – Stormwater Runoff</p>
12	8-Nov Tuesday	<p><u>Lecture/Discussion</u>: Site Layout and Urban Design</p> <p><u>Readings</u>:</p> <ul style="list-style-type: none"> • Burnham Redevelopment Master Plan

		<ul style="list-style-type: none"> • Berke et al. Ch. 13 • TBD
12	10-Nov Thursday	<u>Lab: Urban Design Paradigms</u> <u>Assignment: 6e – Urban Design Paradigms</u> Due: A6d – Site Engineering Analysis – Stormwater and Wastewater Management
13	15-Nov Tuesday	<u>Lecture/Discussion: Site Engineering Analysis – Streets, Traffic, & Grading</u> <u>Readings:</u> <ul style="list-style-type: none"> • Anderson Ch. 8-11 • Brooks Ch. 10 Grading • Listokin & Walker Supplemental: <ul style="list-style-type: none"> • Georgia DOT Pedestrian & Streetscape Guide
13	17-Nov Thursday	<u>Lab: Streets and Traffic</u> <u>Assignment: 6f – Site Engineering Analysis – Street Layout, and Traffic</u> Due: A6e – Urban Design Paradigms
14	22-Nov Tuesday	Thanksgiving Break
14	24-Nov Thursday	Thanksgiving Break
15	29-Nov Tuesday	<u>Lecture/Discussion: Small Area Plans</u> <u>Readings:</u> <ul style="list-style-type: none"> • Berke et al. Ch. 14
15	1-Dec Thursday	<u>Lab: Using SketchUp</u> <u>Assignment: 6 – Site Plan Report</u> Due: A6f – Site Engineering Analysis – Street Layout and Traffic
16	6-Dec Tuesday	<u>Lecture/Discussion: Course Wrap-up and Work Session</u> Due: Draft Site Plan Map
